……Intro for interview…….

Hello, my name is Vivekanand Kumar, a recent Computer Science graduate from NIT Arunachal Pradesh.

I’m passionate about full-stack development and real-time systems. One of my key projects was a fully voice-controlled video streaming app built with the MERN stack, enabling complete platform navigation through voice. It improved accessibility by 65% and achieved 92% command accuracy.

Another notable project was **Family and Friends Secure Chat System**, built using Socket.io with end-to-end encryption, file sharing, and long-term message deletion — handling over 100 daily messages.

Technically, I work with React, Node.js, Express, REST APIs, Docker, Kubernetes, and Socket.io. I’ve also used SQL/PostgreSQL and applied Agile and SDLC practices across projects.

I’ve solved 500+ DSA problems on LeetCode and GeeksforGeeks, earning a Knight rank and 3-star rating. I also hold a certified IQ score of 135.

During my internship at NIT AP, I built an IoT-based water quality monitoring system using sensors and dashboards that helped reduce water waste and improved skin and hair health for 23% of students.

I believe my skills in full-stack development, real-time systems, and problem-solving align well with your company’s goals, and I’m excited to contribute to impactful projects on your team.
